DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 – 14 and 17 as amended are rejected under 35 U.S.C. 103(a) as being unpatentable over Chandler et al (US5935069) in view of Urbano et al (US5976088), further in view of Groch (US4549552).

The former is directed to predictive determination of inter alia ECG trigger salients from the history of prior ECG waveforms for triggering on systole or diastole, see cols. 3 – 4 thereof. It would have been obvious in view of the latter Fig. 2 to use any well-known ECG-based epoch such as end-systolic or end diastolic chamber emptying or filling points for echocardiographic characterization of various pathologies such as ejection fractions or valve actions. Further, since artisans recognized early on that end diastole and end systole were approximately coincident with the T-wave zero crossings with respect to baseline and were available from the ECG waveform, it would have been further obvious to use such as triggers in the former, where these times of imaging were desirable for capture.

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chandler et al in view of Urbano et al as applied to claim 1 above, and further in view of

Art Unit: 3768

Manning et al (US6501979) and Groch, since whereas the former are non-specific as to program-based implementation, it would have been obvious in view of the latter Fig. 5 and col. 13 lines 45 – 55 and claim 20 to effect a program protocol to select predictive triggers based on the ECG, and to specifically use times associated with ECG T-wave crossings to approximate the end-diastole and end-systole times..

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
